

Exercise 2.b: English-Indo. Translation

The fantasy is seemingly to come closer to reality as advances in technology mean computers now are learning to interact with human characteristics, such as voices, touch and even smell, said Gates, whose Redmond, a Washington-based software company has been spending more than US\$ 6 billion on research and development this year to make the company stay a world leader in software development, responding a question at seminar held in Singapore, whether he thought computers could ever be implanted in the human brain.
